

Some general feedback on the one-pagers

- Start with the topic
- Don't primarily describe figures, but talk about results (more for writing)
Figure 1 shows a vs b, one can see that c d e is happening.
I find that c d e is happening (Figure 1). This is because...
- Don't use "this study aims at..." – I will vs. I am going to – "I will" implies that this might not happen
- Why is your particular question important?
 - Your goal is to evaluate a model
 - Your goal is to understand a process better so that it can better be implemented into the model
 - Your goal is to improve / bias correct a model
- Your question should be at a level suitable for an MSc
- Use of AI – be a bit careful
- Detrending: subtraction of linear trend vs. subtraction of running mean (20 years)
- Maybe examine year-to-year changes rather than the absolute signal
- For your figures: What's the best way to plot things to tell your story (for example scatter plot versus two time series)
